## **PrEP in England – Statement from the UK-CAB**

The UK-CAB welcomes today's announcement that PrEP will be made routinely available across England, contributing to the government's goal to end new HIV transmissions by 2030.

The fight does not stop here. The partnerships which have fought long and hard to secure PrEP in England must continue to work together to ensure that all people who may benefit from PrEP have the knowledge and information to access it. Lessons must be learned from this campaign to ensure we do not experience the same barriers to access future treatment technologies which could benefit people at risk of, or living with HIV.

We urge NHS England and Public Health England to expedite the dissemination of their learnings to date from the PrEP Impact trial in order to assist Local Authorities and Sexual Health Services deliver PrEP to those who need it.
